## DISCLAIMER

This manual describes proper installation procedures and provides necessary standards required for product reliability. Warranty details are available at [IronRidge.com](http://IronRidge.com). All installers must thoroughly read this manual and have a clear understanding of the installation procedures prior to installation. Failure to follow these guidelines may result in property damage, bodily injury or even death.

### IT IS THE INSTALLER'S RESPONSIBILITY TO:

- Ensure safe installation of all electrical aspects of the array. All electrical installation and procedures should be conducted by a licensed and bonded electrician or solar contractor. Routine maintenance of a module or panel shall not involve breaking or disturbing the bonding path of the system. All work must comply with national, state and local installation procedures, product and safety standards.
- Comply with all applicable local or national building and fire codes, including any that may supersede this manual.
- Ensure all products are appropriate for the installation, environment, and array under the site's loading conditions.
- Use only IronRidge parts or parts recommended by IronRidge; substituting parts may void any applicable warranty.
- Review the [Design Assistant](#) to confirm design specifications.
- Ensure provided information is accurate. Issues resulting from inaccurate information are the installer's responsibility.
- Ensure bare copper grounding wire does not contact aluminum and zinc-plated steel components, to prevent risk of galvanic corrosion.
- If loose components or loose fasteners are found during periodic inspection, re-tighten immediately. Any components showing signs of corrosion or damage that compromise safety shall be replaced immediately.
- Provide an appropriate method of direct-to-earth grounding according to the latest edition of the National Electrical Code, including NEC 250: Grounding and Bonding, and NEC 690: Solar Photovoltaic Systems.
- Disconnect AC power before servicing or removing modules, AC modules, microinverters and power optimizers.
- Review module manufacturer's documentation for compatibility and compliance with warranty terms and conditions.

**CAUTION:** Module removal may disrupt the bonding path and could introduce the risk of electric shock. If during servicing a module is required to be removed, a bonding jumper shall be installed between the adjacent modules from where the module was removed to maintain the bond path.

## OVERVIEW

### BX CHASSIS (5° & 10°)

BX Chassis is designed to clamp PV modules and secure them in place. Reference tabs are integrated to aid with aligning modules according to system layout. The Chassis is available in two SKUs: 5 and 10 degree tilt configurations. The Chassis is designed to accommodate 4 full size (16" x 8" x 4") or 8 half-size concrete ballast blocks (16" x 8" x 2") nominal dimensions.

Concrete ballast block must meet the following requirements:

- Manufactured per ASTM C 1491 (Standard specification for concrete pavers)
- Manufactured to resist freeze-thaw as required per local conditions
- Weight: 14-17 lbs +/- 2 lbs for half size and 28-34 lbs +/- 2 lbs for full size
- Compressive Strength requirement: 3000 PSI min

### MODULE CLAMPING

Top Clamps are module frame height specific and accommodate most common module sizes: 30mm, 31mm, 32mm, 33mm, 35mm, 38mm, 40mm, 46mm.

### ARRAY GROUNDING

Only one PV Module Grounding Lug is required per continuous array, regardless of array size. Use the IronRidge PV Module Grounding Lug (PV-LUG-01-A1).

Alternately, the following grounding lugs have been tested or evaluated for use with the BX system:

- IlSCO GBL-4DBT
- Amphenol HGLUI
- Burndy CL501TN, BGBS4

### MLPE DEVICES (OPTIONAL)

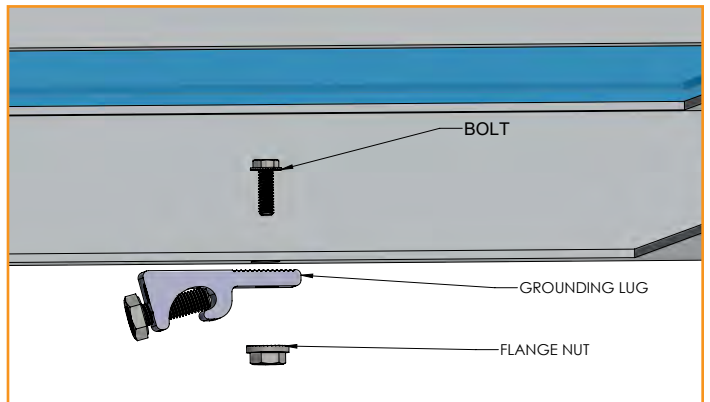

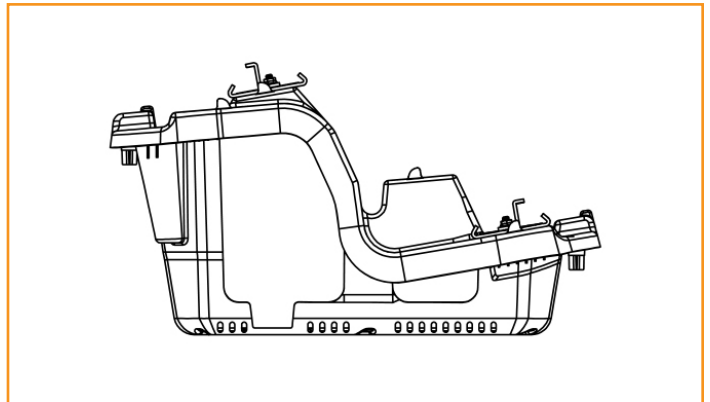

The following MLPE module mounting brackets have been tested or evaluated for use with the BX system:

- EcoFasten Frame MLPE Mount
- QMPV Accessory Frame Bracket

► Refer to respective installation instructions of MLPE module mounting brackets.

### WIRE MANAGEMENT

Optional Edge Clips and wire ties can be used to aid with wire management.

## INSTALLATION STEPS (QUICK GUIDE)

1. Mark out all fire setbacks on the roofing plane.
2. Measure and mark out footprint of array according to the approved plan set location.
3. Starting at the south edge of the approved plan set, chalk the South Array Edge, making sure that this line is at least 8" away from the South Fire Setback.
4. Measure Chassis spacing (refer to chart below) and chalk out 3 rows, 25' each.
5. Measure out the Chassis locations by marking along each row, module width plus 3/8".
6. Place Chassis on cross hairs. Align cross hairs with alignment marks on Chassis.
7. Install MLPE as needed.
8. Load Chassis with blocks as per the plan set.
9. Install fixed attachment points as required by the plan set for anchored hybrid systems, seal/flash in accordance with the roofing manufacturer's guidelines.
10. Module Installation
  - a. Place all Bottom Clamps on Chassis.
  - b. Land all panels on Chassis.
  - c. Place all Top Clamps and ensure proper alignment and engagement of the Bottom Clamp.
  - d. Make sure that all Clamps are fully engaged and square to the module and torqued appropriately.
11. Complete Array Bonding
  - a. Install 8" Module Bonding Jumpers between all modules along the rows.
  - b. Install 38" Row Bonding Jumpers between all rows.
12. Install PV Module Grounding Lug to ground each array.

It can be helpful on constrained arrays to chalk line every row, but it is not required.

The illustration below shows the order of chalk operations for marking out the starter array, as well as a corresponding Chassis spacing table which can be used to easily find the approx. Chassis spacing within 1/8". For more precise measurements use the formulas provided at the bottom of the table.

Module Width	5° Chassis Spacing	10° Chassis Spacing
38.5" - 39"	48.5"	51"
39" - 39.5"	49"	51.5"
39.5" - 40"	49.5"	52"
40" - 40.5"	50"	52.5"
40.5" - 41"	50.5"	53"
41" - 41.5"	51"	53.5"
41.5" - 42"	51.5"	54"
42" - 42.5"	52"	54.5"
42.5"+	52.5"	55"

Spacing Formulas: |  $\text{Width} \cos(5^\circ) + 10''$  |  $\text{Width} \cos(10^\circ) + 13''$

## 1. MARK LAYOUT

Using the approved planset, mark out all fire setbacks and the array footprint on the roof(s).

Mark the South Array Edge with a 25' line (for example). If the southern edge of the array is against the South Fire Setback, mark the South Array Edge at least 8" away from the setback. This will ensure that no part of the Chassis is in the setback.

Measure Chassis spacing (referring to table on [Page 5](#)) and chalk out 3x 25' rows. Then measure out the Chassis locations by marking along each row (module width plus 3/8").

- These layouts are useful for maintaining a straight line at the start of the array. Once started the rest of the system is build as you go.

## 2. PLACE CHASSIS

Place first Chassis at Southwest corner of the array, aligning the center reference hole with the cross hair marker. Repeat for each additional Chassis in the array.

- After the array has been installed, the Chassis at the East and West edges of the array should be moved inward from the perimeter reference lines so that they are fully underneath the modules.

## 3. MOUNT MLPE (OPTIONAL)

Mount microinverters and power optimizers directly to the Chassis using the MLPE Mounting Hardware Kit. Alternatively, you can use a third party module mounting bracket (following manufacturer instructions).

To install the MLPE Mounting Hardware Kit, place the Cage Nut into either of the square cut-outs on the lower edge of a Chassis. Secure your MLPE device with a 5/16" Flange Bolt torqued to 60 in-lbs.

## 4. LAY BALLAST

Place ballast blocks in BX Chassis as indicated on site layout.

## 5. ANCHOR SYSTEM (OPTIONAL)

### A. SECURE L-FEET

The Attachment Kit uses an 8' minimum Galvanized Strut Channel with slotted holes to span across two Chassis and a Flat Roof Attachment(FRA) Anchor in order to anchor the Chassis to the roof. Secure L-Feet onto the Chassis by installing the Carriage Bolt and Square Washer from the underside of each Chassis through the reference hole. Torque Flange Nut to 120 in-lbs.

- Refer to Flat Roof Attachment [installation instructions](#) for details, where applicable.
- Flat Roof Attachment Kit is not part of the grounding path.

### B. ATTACH STRUT CHANNEL

Secure, at minimum, an 8' x 1-5/8" Galvanized Strut Channel with slotted holes, through the two Chassis onto the L-Feet using the provided 3/8" Bolt with 1-1/4" washer to a Channel Nut (not provided). Torque Nut to 250 in-lbs.

### C. FINISH ANCHORS

Assemble an L-Foot onto the FRA Anchor and flashing membrane (where applicable) using the 3/8" Bolt and Flat Washer torqued to 250 in-lbs. Then, install L-Foot and Flat Roof Attachment assembly at the Strut Channel midpoint using the provided 3/8" Bolt with a 1-1/4" Washer to a Channel Nut (as before) torqued to 250 in-lbs.

- After anchor assembly is installed seal/flash per roofing manufacturer's guidelines.
- Anchors shall not be located on a perimeter south row.
- The following 3rd party roof attachment has been tested or evaluated for use with BX:
  - Anchor Products U-Anchors

## 6. INSTALL MODULES

### A. PLACE CLAMPS

Place Bottom Clamp over the Chassis' corner bolt, then pull clamp towards the outer edge.

- The north end of the North Row and south end of the South Row do not need bottom clamps.
- When a Chassis is shifted inwards under a module, clamps should be installed on all corner bolts supporting the module.

### B. LAY MODULES

Starting in the South-West corner and working east, lay modules in a row onto edge of Bottom Clamps. Double-check panel spacing along each row.

- You can use reference tabs located in the middle of the Chassis to properly space modules.

### C. SECURE MODULES

To secure a module, first pull the Bottom Clamp until it is snug against the inner flange of the module. Then place the Top Clamp and Flange Nut over the bolt and torque to 120 in-lbs.

## 7. COMPLETE BONDING

### A. MODULE-TO-MODULE BONDING

The 8" Bonding Jumper is an electrical bonding jumper that can be used for module to module bonding.

- New jumpers should be used if re-installation of jumper is required.
- Jumpers are installed on the bottom flange of modules.
- Supports flange thicknesses 1.2mm to 3.1mm.

## 7. COMPLETE BONDING (CONTINUED)

### B. ROW-TO-ROW BONDING

The 38" Bonding Jumper is an electrical bonding jumper that should be used for row to row bonding by securing Clips to inner flanges on long side of a module from each row, as shown. Tapping Clips into place may be required for modules with thicker flanges.

- The bonding does not need to take place on the same side of the array, so long as every row is bonded to the next row.

## 8. PV MODULE GROUNDING LUGS

Ground each continuous array by securing a PV Module Grounding Lug to any module in the array.

- Only one PV Module Grounding Lug is required per continuous array, regardless of array size. Reference module manufacturer's installation instructions for grounding location.

## STRING INVERTER MOUNTING KIT (OPTIONAL)

The String Inverter Mounting Kit creates a mounting platform for inverters on top of the BX Chassis.

### A. CROSS RAILS

Cut provided rails to length, as needed. Install four Cage Nuts in the square holes on the edges of the Chassis. Then, install an L-Foot into each Cage Nut location using a 5/16" bolt tightened to 80 in-lbs. Attach rails to L-Feet using 3/8" T-bolt bonding hardware tightened to 250 in-lbs.

### B. TOP RAILS

Assemble the top rails using four L-Feet on top of cross rails. Install four L-Feet on top of the cross rails using 1/4" T-bolt and nut tightened to 80 in-lbs. Attach top rails to L-Feet using 3/8" T-bolt Bonding Hardware tightened to 250 in-lbs. Space top rails according to the mounting requirements for the inverter being used.

## JAYBOX INSTALLED WITH STRING INVERTER MOUNTING KIT

**A.**  
Prior to installation, use step drill bit to place pass through holes for conduits or water-tight connectors. Drill bit starter locations are provided on the sides and front of enclosure.

**B.**  
Use rail-specific MLPE mounting hardware to attach Rail Hangers to rail. Install only on the String Inverter Mounting Kit. Ensure junction box is pushed as close to the rail as possible. Torque to 80-in lbs (1/2" or 7/16" socket).

➤ Do not overtighten.

**C.**  
Install wiring, conduit and fittings per NEC requirements and following local AHJ guidance. Using Philips Head Driver tighten the bolt.

➤ For additional details refer to the full QM [Installation Manual](#).
