- (1) Rated power of the module at STC will not exceed the power optimizer Rated Input DC Power. Modules with up to +5% power tolerance are allowed.
- (2) For other connector types please contact SolarEdge.
- (3) Power de-rating is applied for ambient temperatures above  $+85^{\circ}$ C /  $+185^{\circ}$ F for S440, and for ambient temperatures above  $+75^{\circ}$ C /  $167^{\circ}$ F for S500B. Refer to the Power Optimizers Temperature De-Rating Technical Note for more details.

- (4) A string with more than 30 optimizers does not meet NEC rapid shutdown requirements; safety voltage will be above the 30V requirement.
- (5) If the inverters rated AC power  $\leq$  maximum nominal power per string, then the maximum power per string will be able to reach up to the inverters maximum input DC power. Refer to the <u>Single String Design Guidelines Application Note</u> for more details.
- (6) It is not allowed to mix S-series and P-series Power Optimizers in new installations
